

ABSTRACT OF THE DISCLOSURE

A leg wrap for wrapping a leg of an animal includes an inner wrapping sheet of flexible material, an outer wrapping sheet of flexible material, and soft, resilient filler material disposed between the inner wrapping sheet and the outer wrapping sheet. Stitching extends through the inner and outer wrapping sheets and the filler material securing the inner and outer wrapping sheets and the filler material together. The stitching forms a plurality of rectangular pillows having primary axes disposed perpendicular to the top edges and the bottom edges of the inner and outer wrapping sheets. Securement strips are releasably attached together to secure the leg wrap to the animal leg. The securement strips extend in the same direction as the lines of stitching and are placed to provide uniform tension along the leg whenever the leg wrap is used.
